

# RABBITSTAT

**R**ABBITSTAT is a unique gut conditioner for rabbits, supplying a physiologically balanced blend of volatile fatty acids to the caecum to promote healthy caecal activity.

## THE PRODUCT:

RABBITSTAT is a blended mix of carboxylic acids found naturally in the caecum of the healthy adult rabbit.

These acids are absorbed onto a unique blend of mineral carriers to pass along the digestive tract.

As the product moves along the gut, small quantities of the active ingredients are released from the carrier to acidity the gut and to create an environment that favours the development of a healthy gut microflora

The presence of these acids in the gut has an inhibitory effect on many of the potential enteropathogens found in rabbits.

RABBITSTAT creates the ideal conditions for caecal activity in fryer rabbits by stimulating the development of natural fibre-digesting bacteria and lowering caecal pH to exclude potential enteropathogens.

RABBITSTAT helps to reduce the risk of hind gut fermentation of excess protein which can lead to toxic levels of ammonia developing in the caecum.

## MAJOR BENEFITS:

- RABBITSTAT is a blend of natural products, and is free from antibiotics.
- RABBITSTAT assists the gut achieve optimum conditions for healthy growth.
- RABBITSTAT has been shown to improve Feed Conversion Ratios in rabbits.
- RABBITSTAT reduces mortality especially in fryers.
- RABBITSTAT improves daily weight gain throughout the entire fattening period.
- RABBITSTAT is completely biodegradable and residue-free.

## USAGE:

Application rate in rabbit feed 2-5kg/Te depending on the buffer capacity of the feed and the challenge factor on the farm.

## PACKAGING:

RABBITSTAT is packed in 25kg multi-walled foil lined paper sacks.
